Numericals , Flatter the curve Greater the Elasticity

Factors affecting Elasticity of demand. MCQ's

Price Elasticity of Demand:

It refers to **percentage change in quantity demanded** in response to **percentage change in price** of the commodity:

Degree of Elasticity of Demand

1. Perfectly Inelasticity of Demand ✓ ($E_d = 0$)
2. Less Elasticity of Demand ✓ ($E_d < 1$)
3. Unitary Elasticity of Demand ✓ ($E_d = 1$)
4. Highly Elasticity of Demand ✓ ($E_d > 1$)
5. Perfectly Elasticity of Demand ✓ ($E_d = \infty$)

I. Perfectly Inelasticity of Demand ($E_d = 0$)

Perfectly Inelasticity of Demand
 No change demand

1. Perfectly Inelasticity of Demand ($E_d = 0$)

Perfectly Inelasticity of Demand
 No change in demand

P_x	$Q_d x$
100	100
200	100

II. Less Elasticity of Demand ($E_d < 1$)

Less Elasticity of Demand
 ↓
 change in demand

$$E_d < 1$$

Price

P	Qd
100	100
200	80

III. Unitary Elasticity of Demand ($E_d = 1$)

Unitary Elasticity of Demand

equal

change

demand

$$E_d = 1$$

Price

P_x	Q_{dx}
10	20
20	10

III. Unitary Elasticity of Demand ($E_d = 1$)

Unitary Elasticity of Demand

equal

change

demand

$E_d = 1$ Price

P_x	Q_d
10	20
20	10

IV. Highly Elasticity of Demand ($E_d > 1$)

Highly Elasticity of Demand
 जयाग change demand

$E_d > 1$ Price

P	Qd
100	100
110	200

V. Perfectly Elasticity of Demand ($E_d = \infty$)

Perfectly Elasticity of Demand
change demand.

$$E_d = \infty$$

P	Q _d
100	100
100	200
100	300
100	400

Percentage Method

$$E_d = (-) \frac{\% \text{ age change in } Q_d}{\% \text{ age change in Price}}$$

COMMERCE WALLAH

Elasticity of Demand (E_d)

Percentage Method

Proportional Method

$$E_d = (-) \frac{\text{Percentage Change in Quantity Demanded}}{\text{Percentage Change in Price}}$$

Percentage Change in Quantity Demanded

$$= \frac{\Delta Q}{Q} \times 100$$

$$\Delta Q = Q_1 - Q$$

$$E_d = (-) \frac{\Delta Q}{Q} \times \frac{P}{\Delta P}$$

Or

$$(-) \frac{\Delta Q}{\Delta P} \times \frac{P}{Q}$$

Here :

$$\begin{aligned} \Delta Q &= Q_1 - Q \\ \Delta P &= P_1 - P \end{aligned}$$

Percentage Method

$$E_d = (-) \frac{\% \text{ change in } Q_d}{\% \text{ change in Price}}$$

$$\Delta Q = Q_2 - Q_1$$

$$\frac{\Delta Q}{Q} \times 100$$

Percentage Method

$\Delta P = P_2 - P_1$
 New Price

$E_d = (-) \frac{\% \text{ change in } Q_d}{\% \text{ change in Price}}$

$\Delta Q = Q_2 - Q_1$

$\frac{\Delta Q}{Q} \times 100$

$\frac{\Delta P}{P} \times 100$

Elasticity of Demand (E_d)

Percentage Method

Proportional Method

$$\frac{\Delta Q}{\Delta P} \times \frac{P}{Q}$$

$$\frac{\Delta Q}{Q} \times \frac{P}{\Delta P}$$

$$E_d = (-) \frac{\text{Percentage Change in Quantity Demanded}}{\text{Percentage Change in Price}}$$

Percentage Change in Quantity

$$= \frac{\Delta Q}{Q} \times 100$$

$$\Delta Q = Q_1 - Q$$

Elasticity of Demand (Ed)

Percentage Method

Proportional Method

$$Ed = (-) \frac{\text{Percentage Change in Quantity Demanded}}{\text{Percentage Change in Price}}$$

Percentage Change in Quantity Demanded

$$= \frac{\Delta Q}{Q} \times 100$$

$$\Delta Q = Q_1 - Q$$

$$Ed = (-) \frac{\Delta Q}{Q} \times \frac{P}{\Delta P}$$

Or

$$\frac{\Delta Q}{\Delta P} \times \frac{P}{Q}$$

$$\begin{aligned} \Delta Q &= Q_1 - Q \\ \Delta P &= P_1 - P \end{aligned}$$

$$\frac{Q}{P} \quad \frac{Q_1}{P_1}$$

$$\frac{\Delta Q}{\Delta P} \times \frac{P}{Q}$$

$$\frac{Q_1 - Q}{Q} \times \frac{P}{P_1 - P}$$

Question

1. At Rs. 26 per unit, the demand for a commodity is 30 units. If the price increases from Rs. 26 to Rs. 30 per unit, the demand decreases to 15 units. Calculate the price elasticity of demand.

Ans 3.25

$$\begin{matrix} Q \\ P \end{matrix} \quad \begin{matrix} Q_1 \\ P_1 \end{matrix}$$

Elasticity of Demand (Ed)

Percentage Method

Proportional Method

Ed = (-)

Percentage Change in Quantity Demanded
Percentage Change in Price

Percentage Change in Quantity Demanded

$$= \frac{\Delta Q}{Q} \times 100$$

$$\Delta Q = Q_1 - Q$$

$$\frac{Q_1 - Q}{P_1 - P} \times \frac{P}{Q}$$

$$\frac{Q_1 - Q}{Q} \times \frac{P}{P_1 - P}$$

Question

2. Price elasticity of demand is found to be (-2) price falls from Rs. 10 per unit to Rs. 8 per unit. Find the percentage increase in quantity demanded.

$$Ed = (-2)$$

$$P = 10$$

$$P_1 \rightarrow 8$$

% change in Q_d

$$Ed = (-) \frac{\% \text{ change in } Q_d}{\% \text{ change in } P}$$

Ans 40%

Question

3. When Price of a good rises from Rs. 20 per unit to Rs. 23 per unit, its demand falls by 30 percent. Calculate price elasticity of demand.

Ans 2

Question

3. When Price of a good rises from Rs. 20 per unit to Rs. 23 per unit, its demand falls by 30 percent. Calculate price elasticity of demand.

Ans 2

$$P = 20 \quad \Delta P = P_2 - P_1 = 23 - 20 = 3$$
$$P_1 = 20 \quad P_2 = 23$$
$$\% \text{ change in } Q_d = -30$$

$E_d = ?$

$\frac{1}{\% \text{ change in Price}}$

$$\frac{\Delta P}{P} \times 100$$
$$\frac{3}{20} \times 100 = 15$$

$$E_d = (-) \frac{\% \text{ change in } Q_d}{\% \text{ change in Price}}$$

$$= (-) \frac{-30}{15} = 2$$

$$E_d = 2$$

$$E_d > 1$$

2 > 1

Question

5. From the following table, calculate price elasticity of demand by the percentage method. Ans 1.2

Price of X (Rs. Per unit)	Q	Total Expenditure = P X Q (Rs.)
(4) - P ₁	150	TE 600
(5) - P ₂	105	TR 525

$$\Delta Q = Q_1 - Q_2 = 150 - 105 = 45$$

$$\Delta P.P. = 1 \text{ (5-4)} = 1$$

$$E_d = \frac{\% \text{ change in } Q_d}{\% \text{ change in Price}} = \frac{30}{25} = 1.2$$

$$\% \text{ change in } Q_d = \frac{\Delta Q}{Q} \times 100 = \frac{45}{150} \times 100 = 30$$

$$\% \text{ change in Price} = \frac{\Delta P}{P} \times 100 = \frac{1}{4} \times 100 = 25$$

Question

6. Price of the commodity increases from Rs. 50 to Rs. 60 per unit. Quantity demanded initially was 200 units. What should be the new quantity so that elasticity of demand is established to be unitary.

Ans: 160 units

Question

6. Price of the commodity increases from Rs. 50 to Rs. 60 per unit. Quantity demanded initially was 200 units. What should be the new quantity so that elasticity of demand is established to be unitary.

Ans: 160 units

$$\begin{aligned} P_0 &= 50 \\ P_1 &= 60 \\ Q_0 &= 200 \\ Q_1 &=? \\ E_d &= 1 \end{aligned}$$
$$\Delta P = P_1 - P_0$$
$$= 60 - 50$$
$$= 10$$

$$E_d = (-) \frac{\Delta Q}{\Delta P} \times \frac{P}{Q}$$

$$1 = (-) \frac{x}{10} \times \frac{50}{200}$$

Question

6. Price of the commodity increases from Rs. 50 to Rs. 60 per unit. Quantity demanded initially was 200 units. What should be the new quantity so that elasticity of demand is established to be unitary.

Ans: 160 units

$$P_1 = 50$$

$$P_2 = 60$$

$$Q_1 = 200$$

$$Q_2 = ?$$

$$Ed = 1$$

$$\Delta P = P_2 - P_1$$

$$60 - 50$$

$$Ed = (-) \frac{\Delta Q}{\Delta P} \times \frac{P}{Q}$$

$$1 = (-) \frac{x}{10} \times \frac{50}{200}$$

$$Q = -40$$

$$1 = - \frac{50x}{2000}$$

$$2000 = -50x$$

$$x = \frac{2000}{-50}$$

$$x = -40$$

$$\Delta Q = Q_2 - Q_1$$

$$-40 = x - 200$$

$$-40 + 200 = x$$

$$160 = x$$

$$Q_2 = 160 \text{ units}$$

Geometric Method/ Point Method

Under this method, the Elasticity can be measured by taking points on a straight line Demand Curve.

Geometric Method/ Point Method

Under this method, the Elasticity can be measured by taking points on a straight line Demand Curve.

$E_d = \frac{\text{Lower Segment}}{\text{Upper Segment}}$

$E_d = \infty$
 $E_d > 1$
 $E_d < 1$
 $E_d = 1$
 $E_d = 0$

(iii) $C \rightarrow E_d = \frac{CE}{CA} = \frac{2}{2} = 1$
 $E_d = 1$

(iv) $D \rightarrow E_d = \frac{DE}{DA} = \frac{1}{3} = 0.33$
 $E_d < 1$
 $0 < 1$

(i) $A \rightarrow E_d = \frac{AE}{0} = \frac{4}{0} = \infty$
 $E_d = \infty$

$\rightarrow E_d = \frac{0}{AE} = \frac{0}{4} = 0$
 $E_d = 0$

(v) $B \rightarrow E_d = \frac{BE}{BA} = \frac{3}{1} = 3$
 $E_d > 1$
 $3 > 1$

Geometric Method/ Point Method

Under this method, the Elasticity can be measured by taking points on a straight line Demand Curve.

$E_d = \frac{\text{Lower Segment}}{\text{Upper Segment}}$

$E_d > 1$
 $E_d < 1$
 $E_d = 1$
 $E_d = \infty$
 $E_d = 0$

(i) A $\rightarrow E_d = \frac{AE}{OE} = \frac{4}{0} = \infty$
 $E_d = \infty$

(ii) E $\rightarrow E_d = \frac{OE}{AE} = \frac{0}{4} = 0$
 $E_d = 0$

(iii) C $\rightarrow E_d = \frac{CE}{CF} = \frac{2}{2} = 1$
 $E_d = 1$

(iv) D $\rightarrow E_d = \frac{DE}{DF} = \frac{1}{3} = 0.33$
 $E_d = 0.33$

(v) B $\rightarrow E_d = \frac{BE}{BF} = \frac{3}{1} = 3$
 $E_d = 3$

Flatter the curve, Greater the Elasticity

Factors affecting Price Elasticity of Demand:

1. Nature of Commodity:

- Necessity goods (Salt, Kerosene Oil, Vegetables etc.) have **less elastic** of demand.
- Luxurious goods (Like costly Furniture, Luxurious Car) have **more elasticity of demand**
- Comfort Goods (like clothes, bread, butter) have **moderate elasticity** of demand

2. Availability of Substitutes:

- If close substitutes are there – **more elasticity** of demand.
(Ex. Tea & Coffee)
- If close substitutes are not there – **inelasticity of demand**.

$$E_d = \frac{1}{\text{slope of Demand Curve}} \times \frac{P}{Q}$$

$0, \infty$

$$E_d = \frac{1}{\text{slope of Demand Curve}} \times \frac{P}{Q}$$

$$E_d = \frac{1}{0} \times \frac{P}{Q}$$

$$E_d \rightarrow \infty$$

$0, \infty$

$$E_d = \frac{1}{\text{slope of Demand Curve}} \times \frac{P}{Q}$$

$$E_d = \frac{1}{0} \times \frac{P}{Q}$$

$$E_d \rightarrow \infty$$

$$E_d = \frac{1}{\infty} \times \frac{P}{Q}$$

$$E_d \rightarrow 0$$

- ① More elasticity of demand
- ② Less " " "
- ③ Inelastic " "
(No)

Factors affecting Price Elasticity of Demand:

1. Nature of Commodity:

- Necessity goods (Salt, Kerosene Oil, Vegetables etc.) have **less elastic** of demand.
- Luxurious goods (Like costly Furniture, Luxurious Car) have **more elasticity of demand**
- Comfort Goods (like clothes, bread) have **moderate elasticity** of demand

2. Availability of Substitutes:

- If close substitutes are there, demand is **more elastic**.
(Ex. Tea & Coffee)
- If close substitutes are not available, demand is **less elastic**.

Factors affecting Price Elasticity of Demand:

1. Nature of Commodity:

- Necessity goods (Salt, Kerosene Oil, Vegetables etc.) have less elastic of demand.
- Luxurious goods (Like costly Furniture, Luxurious Car) have more elasticity of demand
- Comfort Goods (like clothes, bread, butter) have more elasticity of demand

10 Lacs → 12 Lacs

P1 → M

Tea Coffee
P1 P2
Qd1 Qd2

2. Availability of Substitutes:

- If close substitutes are there – more elasticity of demand
(Ex. Tea & Coffee)
- If close substitutes are not there – inelasticity of demand

3. Postponed of Use:

- If consumption can be postponed, then there is **more elasticity** of demand.
- If consumption can't be postponed, then there is **inelasticity** of demand.

4. Income of the Buyer:

- If income of the buyer is more, then there is **less elasticity** of demand.
- If the income of Buyer, is low, then there will be **more inelasticity** of demand.

5. Habits of Consumer:

- Habitual goods like Alcohol, Cigarette have **inelastic** demand.

3. Postponed of Use:

- If consumption can be postponed, then there is **more elasticity** of demand.
- If consumption can't be postponed, then there is **inelasticity** of demand.

4. Income of the Buyer:

- If income of the buyer is more, then there is **less elasticity** of demand.
- If the income of Buyer, is low, then there will be **more elasticity** of demand.

5. Habits of Consumer:

- Habitual goods like Alcohol, Cigarette have **inelastic demand**.

1.5 → 2.5

1.5 → 1.1

6. Proportion of Income spent on a commodity

- If consumer spends large proportion of their income (car, scooter), then there is **more elasticity** of demand
- If consumer spends small position of their income (tooth paste, newspaper, soap), then there is **inelastic** demand.

7. Time Period:

Demand is **inelastic** in short period.

Demand is **elastic** in long period.

6. Proportion of Income spent on a commodity

- If consumer spends large proportion of their income (car, scooter), then there is **more elasticity** of demand
- If consumer spends small position of their income (tooth paste, newspaper, soap), then there is **inelastic** demand.

10/2/2021

7. Time Period:

- Demand is **inelastic** in short period.
- Demand is **elastic** in long period.

Question

When demand curve is parallel to X-axis, elasticity of demand is:

- A Unity
- B Zero
- C Greater than unity
- D infinity

Question

When demand curve is parallel to X-axis, elasticity of demand is:

- A Unity
- B Zero
- C Greater than unity
- ☒ D infinity

Question

When percentage change in demand is less than percentage change in price, demand is:

perfectly inelastic

perfectly elastic

more than unitary elastic

Less than unitary elastic

Question

When percentage change in demand is less than percentage change in price, demand is:

$$\textcircled{E_d} < \textcircled{1}$$

A perfectly inelastic

B perfectly elastic

C more than elastic

D Less than unitary elastic

Question

When there is no change in quantity demanded in response to any change in price, it is a situation of

- A Zero price elasticity
- B Infinite price elasticity
- C Unitary price elasticity
- D None of these

Question

When there is no change in quantity demanded in response to any change in price, it is a situation of

- ☒ A Zero price elasticity
- ☐ B Infinite price elasticity
- ☐ C Unitary price elasticity
- ☐ D None of these

P	Qd
10	10
20	10

Question

What will be the elasticity of demand when demand curve is parallel to Y-axis?

A Unity

B Zero

C Less than unity

D More than unity

Question

What will be the elasticity of demand when demand curve is parallel to Y-axis?

A Unity

B Zero

C Less than unity

D More than unity

Question

On all points of a rectangular hyperbola demand curve, elasticity of demand is:

- ☒ A Equal to unity
- ☐ B Zero
- ☐ C Greater than unity
- ☐ D Less than unity

Question

On all points of a rectangular hyperbola demand curve, elasticity of demand is:

$$\epsilon_d = 1$$

A Equal to unity

B Zero

C Greater than unity

D Less than unity

Question

$E_d > 1$ represents:

- A elastic demand
- B inelastic demand
- C unitary elastic demand
- D none of these

Question

$E_d > 1$ represents:

A elastic demand

B inelastic demand

C unitary elastic demand

D none of these

Question

$E_d > 1$ represents:

- A ☒ elastic demand
- B ☐ inelastic demand
- C ☐ unitary elastic demand
- D ☐ none of these

$E_d = 1$

Question

As the flatness of the demand curve increases, the elasticity of demand becomes:

Higher

Lower

Equal to infinity

Equal to zero

Question

Availability of close substitutes makes the demand:

A Less elastic

B More elastic

C Parallel to X-axis

D Parallel to Y-axis

Question

Availability of close substitutes makes the demand:

A Less elastic

B More elastic

C Parallel to X-axis

D Parallel to Y-axis

Question

In case of $E_d = \infty$, demand curve is:

A parallel to X-axis

B a straight line

C parallel to Y-axis

D none of these

E_d

Question

In case of $E_d = \infty$, demand curve is:

A parallel to X-axis

B a straight line

C parallel to Y-axis

D none of these

$$E_d = \infty$$

Question

The demand for sugar and oil is usually:

A Elastic

B Inelastic

C Perfectly elastic

D Perfectly inelastic

Question

When slope of demand curve = 0, the elasticity of demand is:

A 0

B 1

C ∞

D None of these

Question

When slope of demand curve = 0 the elasticity of demand is:

A 0

B 1

~~C ∞~~

D None of these

$$E_d = \frac{1}{\text{slope of DC}} \times \frac{P}{Q}$$

$$\rightarrow \frac{1}{0} \times \frac{P}{Q}$$

$$\rightarrow \infty$$
